DISABILITIES IN OKLAHOMA--ESTIMATES AND PROJECTIONS, REPORT  
OF THE OKLAHOMA SURVEY OF DISABILITIES.  
BY- BOHLEBER, MICHAEL E.  
OKLAHOMA STATE UNIV., STILLWATER, RES. FOUNDATION

PUB DATE 66

EDRS PRICE MF-\$0.50 HC-\$3.64 89P.

DESCRIPTORS- \*MENTALLY HANDICAPPED, \*PHYSICALLY HANDICAPPED,  
\*STATE SURVEYS, \*INTERVIEWS, ATTITUDES, \*STATISTICAL DATA,  
QUESTIONNAIRES, RURAL URBAN DIFFERENCES, INDIVIDUAL  
CHARACTERISTICS, VOCATIONAL REHABILITATION, AGE, SEX  
(CHARACTERISTICS), RACIAL CHARACTERISTICS, POPULATION TRENDS,  
OKLAHOMA,

THE PURPOSE OF THE STUDY WAS TO PROVIDE REASONABLY  
ACCURATE ESTIMATES OF THE NUMBER AND TYPES OF DISABLED  
PERSONS AND THEIR NEEDS AS A BASIS FOR BOTH PRESENT AND  
FUTURE PLANNING. PERSONAL INTERVIEWS WERE CONDUCTED WITH  
ADULT RESPONDENTS IN 3,000 HOUSEHOLDS IN OKLAHOMA, A RANDOM  
SAMPLE STATIFIED ON THE RURAL-URBAN DIMENSION. DATA FROM  
2,058 INTERVIEWS ARE PRESENTED FOR THE FOLLOWING  
DISABILITIES--(1) VISUAL DEFECTS, (2) HEARING DEFECTS, (3)  
FUNCTIONAL IMPAIRMENTS, (4) ABSENCE OF LIMB, OR AMPUTATIONS,  
(5) MENTAL OR PERSONALITY DISORDERS, AND (6) OTHER CONDITIONS  
SUCH AS CANCER, ALLERGY, EPILEPSY, HEART AND CIRCULATORY  
CONDITIONS, ULCERS, AND SPEECH IMPAIRMENTS. TABULAR DATA ARE  
PRESENTED FOR (1) ESTIMATES OF NUMBERS OF PERSONS AND IN EACH  
OF 10 VOCATIONAL REHABILITATION PLANNING AREAS HAVING  
DISABILITIES, 1970 AND 1975, BY TYPE OF DISABILITY,  
RESIDENCE, SEX, RACE, AND AGE, (3) CHARACTERISTICS OF PERSONS  
HAVING DISABILITIES, (4) ESTIMATES OF NUMBERS OF PERSONS WHO  
HAVE SPENT TIME IN MENTAL HOSPITALS OR CORRECTIONAL  
INSTITUTIONS, (5) ATTITUDES OF RESPONDENTS TOWARD MENTAL  
HOSPITALS, AND (6) ATTITUDES OF RESPONDENTS TOWARD FORMER  
INMATES OF MENTAL HOSPITALS AND PRISONS. FROM THE SAMPLE, IT  
WAS ESTIMATED THAT 17.1 PERCENT OF THE POPULATION HAD SOME  
PHYSICAL OR MENTAL DISABILITY. (PS)

## INTRODUCTION

The essence of science is reliable knowledge, that is, knowledge based on carefully controlled empirical observations. Experience is teaching us that sound decisions by policy-making groups, especially in an increasingly complex world, also must be based on reliable knowledge. In the case of both science and sound governmental policy, too much is at stake frequently to accept the assumptions that are available, especially when the validity of those assumptions is testable. The research reported in the following pages is based partly on these considerations.

The assumptions which are questioned by the research reported here are those concerning the prevalence of physical and mental disabilities in the population of Oklahoma, the types of disabilities, and the needs of the persons who have disabilities. During the summer of 1966, the questions to be asked were specified by personnel of the Vocational Rehabilitation Division, State Board for Vocational Education, and, accordingly, a study was designed which would provide reasonably accurate estimates of the number and types of disabled persons in Oklahoma and their needs. Also, in order to provide a basis for planning for future needs, projections of the estimates for the years 1970 and 1975 were to be made. Knowledge about the characteristics of the population having disabilities is desirable, and therefore esti-

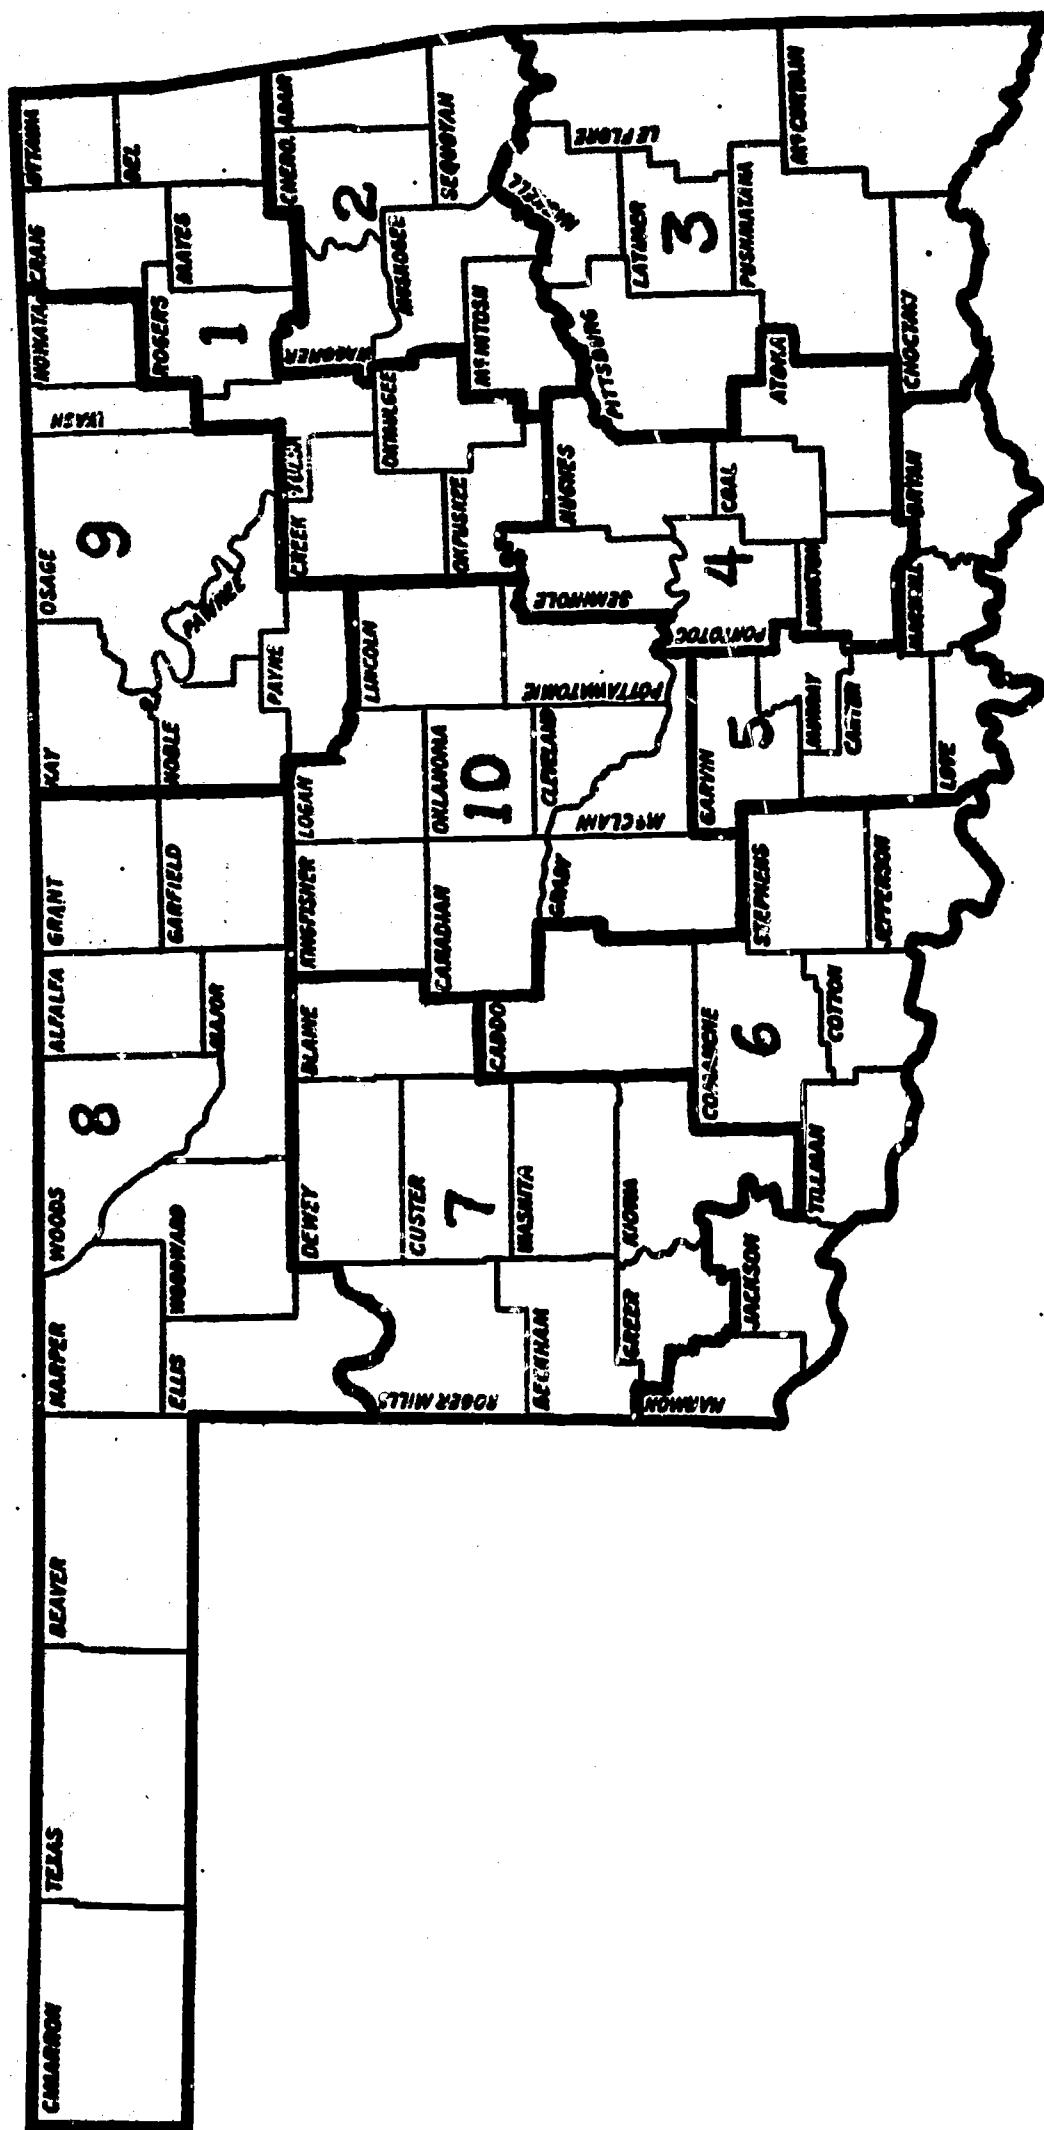

mates appear by age, sex, race, and residence. In addition, employment characteristics of disabled persons and their willingness to leave home for employment or training are provided.

Recognizing that the attitudes of the population toward rehabilitating services are an important aspect of the effectiveness of these services, the research plan included an assessment of Oklahomans' attitudes toward mental hospitals and former mental patients and prison inmates. The results of this assessment appear below in Tables V and VI.

Following the Introduction, which consists of a description of the research and a discussion of the reliability of its results, there appear tables for the state and for each of the ten Vocational Rehabilitation Planning Areas (see Figure 1).

The Method of Study. The survey research technique was employed, with the design calling for personal interviews with adult respondents in a random sample of 3,000 households in Oklahoma.

The sample is a stratified random sample, stratified on the rural-urban dimension. Rural and urban samples were drawn separately for two reasons: to ensure proportionate representation of both types of population and to facilitate sampling with the use of available city directories. The nineteen largest urban places were designated as representing

**Figure 1.** Oklahoma Vocational Rehabilitation Planning Areas.

the urban population. The population of the smallest of these places is about 13,000. In all, the population of the nineteen cities constitutes about 44 per cent of the total state population.

The rural population was sampled by first drawing a random sample of 100 townships. Then, within each drawn township, a random sample of houses was drawn. On the basis of 1960 Bureau of the Census reports, according to which there are 734,593 occupied dwelling units, a sample of 3,000 dwelling units would yield a sampling ratio of 4 per 1,000. Under the assumptions of probability sampling, every occupied household in Oklahoma had one chance in 250 of being included in the sample.

A letter explaining the research and announcing the visit of an interviewer was mailed to every respondent in the sample. Of the 3,000 letters mailed, only 247 were returned for failure to locate address, etc.

The interview schedule, a copy of which appears in the Appendix, was constructed as a joint effort of the writer and the personnel of the office of the Project Director for Statewide Planning, Vocational Rehabilitation Division. It was pretested in the Stillwater area, and the pretest resulted in the splitting of items 19 and 20, which originally were one question. Also, the pretest indicated that certain items were not applicable to all persons with disabilities, for

example, the very young and the very old.

Interviewing was conducted by more than one hundred interviewers, most of whom were school counselors located throughout the state. Practically all interviewing in Oklahoma City and Tulsa was conducted by students who received special training. Interviewing in Tulsa was carried out largely by Tulsa University students under the guidance of Dr. Nancy Feldman.

Of the interviews returned, 2,058 were used for the tabulations. Others were rejected because of incomplete data. However, the largest discrepancy in failing to complete 3,000 interviews resulted from lack of ability of the interviewers to locate respondents. Failure to locate address, vacancy of the house, and repeated absence of occupants were the most frequently given reasons for failure to complete interviews. There were refusals, but the refusal rate was not recorded. The general impression is that the refusal rate was low. Interviewers reported that the general response of persons in the sample was very favorable and that the willingness of respondents to answer the questions was much greater than expected.

Data were coded for tabulation on machine cards, and the analysis was conducted through the computer facility at Oklahoma State University.

Interpretation. The interpretation of the estimates

which appear in this report hinges on several considerations. First, there is the question of definitions. A person is defined as having a disability if he is enumerated by the interviewer in either item 2 or item 3 of the schedule (see Appendix). Three assumptions are apparent: it is assumed the respondent is aware of the physical and mental condition of every member of the household, including himself, the respondent does not willfully withhold information, and all interviewers used the same criteria for determining when to list a person. The evidence indicates that the first two assumptions are reasonable. As mentioned above, interviewers reported an unexpected willingness of respondents to discuss disabilities. Regarding the third assumption, every feasible measure was taken to standardize the enumerating procedure. Interviewers were instructed to describe questionable cases fully, so that the final decision could be made by the project director.

There are two further considerations relevant to definition of a person as having a disability. First, many of the persons who fall into the category of the disabled do so because they have a condition which is defined by the Vocational Rehabilitation Administration as a disability but which they themselves do not define as a disability. The severity of conditions so defined varies greatly. But severity is no guarantee of acceptance of disabled status.

A successful house painter with only one arm insisted that his condition is not a disability. This raises the second consideration, which is that many persons who have conditions which are classified officially as disabilities are gainfully employed and have not lost any time from work because of their conditions. This suggests that one of the most important estimates provided below is that of the number of persons with disabilities who are in their productive years but unemployed.

A primary question in interpreting any statistical report is that of the confidence with which one may accept the estimates. In the language of the statistician, this is the question of confidence limits. Although time did not allow the computation of the confidence limits for all estimates, the limits for the estimate of the proportion of persons in Oklahoma who have a physical or mental disability are provided as follows: From the sample, it is estimated that 17.1 per cent of the population has some physical or mental disability. Using the formula given by Cochran<sup>1</sup>, it was determined that one can be reasonably confident that 95 times out of 100 the true value of the proportion lies within .9 per cent above or below the estimate, that is, between 16.2 per cent and 18 per cent.

---

<sup>1</sup>William G. Cochran, Sampling Techniques (New York: John Wiley and Sons, Inc., 1953), pp. 39 ff.

The reader will note a large number of blank spaces in the cross classifications of populations in the separate Vocational Rehabilitation Planning Areas. These occur because the sample in many cases was not large enough to provide estimates of persons in every category. Here, the estimates are less reliable, but the reader should bear in mind that the estimates within age, sex, residence, and race categories represent the actual location of cases in a fairly large sample.

In some cases, the figures in rows and columns do not add to the total which is presented for the row or column. This is because the estimating procedure involved fractions and the computer rounded numbers but did not correct totals for rounding.

A particular qualification is in order in the interpretation of the attitudinal data. The responses do not come from a cross-section of Oklahoma residents, but rather represent the attitudes of adults who are found at home mainly during ordinary daytime working hours. In this category, women and older persons are over-represented.

Projections of the population having disabilities in 1970 and 1975 are based on the assumption that the proportion of the total population in each sex, race, residence, and age category, especially within Planning Areas, will remain substantially the same, and that the proportion of persons in each of these categories who have disabilities will be

unchanged. It was necessary to make these assumptions because of time limitations. Projections are based on the Oklahoma population projections published by the University of Oklahoma Bureau of Business Research.

## **APPENDIX**

OKLAHOMA STATE UNIVERSITY  
RESEARCH FOUNDATION

## Oklahoma Survey of Disabilities

Address \_\_\_\_\_ County \_\_\_\_\_ Date \_\_\_\_\_  
Type of Residence:      Urban  Rural-Non-Farm  Rural-Farm

1. List all members residing in the household.

VRA

2. Do any members of the household have a physical or mental disability?

Yes  IF YES, WRITE FIRST NAME OF DISABLED AND DESCRIPTION OF DISABILITY.

No  IF NO, ASK QUESTION 3.

(First name)

(Disability)

3. Now, I wonder if you would mind going over this list with me and telling me whether anyone who lives here has any of the conditions listed here.

HAND RESPONDENT COPY OF CATEGORIES,  
READ ALOUD THE CATEGORIES,  
LIST FIRST NAME AND DESCRIPTION,  
WHERE APPROPRIATE, ASK CAUSE OF IMPAIRMENT.

(First name)

(Disability)

IF NO DISABILITIES ARE LISTED ABOVE, GO TO QUESTION 15 AND CONCLUDE THE INTERVIEW FROM THAT POINT.

4. Can \_\_\_\_\_ (each name listed above) move about without the aid of another person?

(First name)

Yes  No

(First name)	Age	Q6	Q7	Q8	Q9

WRITE ANSWERS TO THE FOLLOWING FIVE QUESTIONS IN THE SPACES PROVIDED ABOVE, COMPLETING INFORMATION FOR EACH DISABLED PERSON.

5. At what age did the disability (or did this condition) occur?
6. Was \_\_\_\_\_ employed when the disability occurred?
7. Has \_\_\_\_\_ ever talked with a Vocational Rehabilitation Counselor?
8. Would \_\_\_\_\_ be willing to leave his home or county to receive services or training?
9. Would \_\_\_\_\_ be willing to leave his home or county to be employed elsewhere?

IF NO, ASK

- a. Could you give me any particular reason why?

---

IF THE DISABLED IS UNEMPLOYED ASK QUESTION 10. OTHERWISE GO ON TO 11.

10. Are there any jobs you feel \_\_\_\_\_ could hold at the present time, without any further training?

(First name) Yes No IF YES, What are they?

_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____

11. Has \_\_\_\_\_ ever received any financial aid in connection with the disability?

(First name) Yes No IF YES, From what Agency?

_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____

12. Are any members of your family currently receiving services in or through sheltered workshops or rehabilitation facilities?

Yes  No

(First name)

(Facility)

13. Do you know what a sheltered workshop is?

Yes  IF YES, Would you say that the things you have heard about them are favorable  or unfavorable?

No  IF NO, READ THE FOLLOWING TO THE RESPONDENT:

A sheltered workshop is a place where almost any severely disabled person may come and gain training and otherwise learn any of a large variety of jobs. They earn while they learn and after training may continue on in the workshop at their job, and earn a steady income, or they may leave the workshop and enter competitive employment. In the workshop they need not worry about losing their positions because of fierce competition from their fellow workers. Each is urged to perform at his or her own rate.

14. Would any disabled members of your family be interested in utilizing the services of a sheltered workshop?

(First name)

Yes  No

<input type="checkbox"/>	<input type="checkbox"/>

15. There is much talk about mental institutions in our country today, and there seem to be two opposite views about them. Some people feel that they are mainly custodial, that is, they serve largely to confine and care for the mentally ill, to keep them away from other people. Others believe that they are mainly hospitals where the mentally ill are treated and helped so that many of them return to lead useful lives.

Do you believe that mental institutions in America today operate mostly as custodial institutions or as real hospitals and treatment centers?

Custodial  Don't know

Hospital

16. What proportion of mental patients entering hospitals in the United States nowadays would you guess are returned to their homes to lead useful lives?

Less than one-fourth

Between one-fourth and one-half

Between one-half and three-quarters

More than three-quarters

17. What would be your reaction if you were working in an office or shop and a person who had been in a mental hospital was hired to work near you?

Would you feel OK about it?

have some misgivings?

feel somewhat uneasy?

or feel very uneasy?

18. What would be your reaction if you were working in an office or shop and a person who had been in a prison was hired to work near you?

Would you feel OK about it?

have some misgivings?

feel somewhat uneasy?

or feel very uneasy?

19. Have any members of the household spent any time in a mental hospital?

Yes

No

(First name)

(Institution)

20. Have any members of the household spent any time in a correctional-training school, a penal institution, or other related institutions?

Yes

No

(First name)

(Institution)

This concludes the interview. We are grateful for your time and cooperation. Are there any questions or comments that you have?

Thank you again.
